Art Unit: 1775

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to an article, classified in class 428, subclass 622.
- II. Claims 18-23 and 25-30, drawn to a method, classified in class 228, subclass 227.
- III. Claims 24 and 31-33, drawn to a method, classified in class 228, subclass 122.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the article may be produced by a materially different method such as by disposing all of the layers into a stack and then subsequently heating to melt the solder and join the layers to one another as opposed to the claimed method of heating and melting the solder to form a pre-coat layer on the ceramic, joining the remaining layers to the pre-coated ceramic and reheating the laminated composite.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the article may be produced by a materially

different method such as by pre-heating the ceramic having a solder metal applied thereto to form a pre-coat layer on the ceramic and subsequently joining the remaining layers to the soldered ceramic base and reheating the laminated composite as opposed to the claimed method of only using one heating step to join the members to one another.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions differ in that the invention of Group II requires that an intermediate heating and melting step be performed prior to joining the remaining layers to the ceramic base while the invention of Group III has no such requirement that an intermediate heating step is performed.

Because these inventions are distinct for the reasons given above and the search required for any one of the Groups I-III is not required for any other Group, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
